RNA GO Enrichment (Top 500 Genes per Factor)
Description
xenobiotic metabolic process
wound healing
vascular transport
vascular process in circulatory system
transport across blood−brain barrier
tight junction assembly
taxis
stress response to copper ion
sodium ion transport
sodium ion transmembrane transport
small molecule catabolic process
response to toxic substance
response to metal ion
response to gonadotropin
respiratory electron transport chain
renal system development
regulation of wound healing
regulation of T cell activation
regulation of neuron differentiation
regulation of leukocyte cell−cell adhesion
regulation of cell−cell adhesion
regulation of body fluid levels
regulation of blood coagulation
regionalization
proton motive force−driven mitochondrial ATP synthesis
potassium ion transport
potassium ion transmembrane transport
potassium ion import across plasma membrane
positive regulation of neuron differentiation
positive regulation of lymphocyte activation
positive regulation of leukocyte activation
positive regulation of cell activation
positive regulation of cell−cell adhesion
peptide transport
peptide secretion
peptide hormone secretion
pattern specification process
oxidative phosphorylation
organic anion transport
organic acid transport
organic acid catabolic process
organic acid biosynthetic process
olefinic compound metabolic process
neutrophil migration
neutrophil chemotaxis
nephron development
myeloid leukocyte migration
muscle system process
muscle contraction
mononuclear cell differentiation
monocarboxylic acid transport
monocarboxylic acid biosynthetic process
monoatomic anion transport
modified amino acid transport
mitochondrial ATP synthesis coupled electron transport
lymphocyte differentiation
leukocyte migration
leukocyte chemotaxis
leukocyte cell−cell adhesion
kidney development
inorganic anion transport
hormone metabolic process
heart morphogenesis
granulocyte migration
granulocyte chemotaxis
extracellular structure organization
extracellular matrix organization
external encapsulating structure organization
energy derivation by oxidation of organic compounds
electron transport chain
dorsal/ventral pattern formation
detoxification of copper ion
cytoplasmic translation
collagen fibril organization
chloride transport
chemotaxis
cellular response to xenobiotic stimulus
cellular response to metal ion
cellular response to inorganic substance
cellular respiration
cell chemotaxis
cell−substrate adhesion
cell−matrix adhesion
cell−cell junction organization
cell−cell junction assembly
carboxylic acid transport
carboxylic acid catabolic process
carboxylic acid biosynthetic process
calcium−independent cell−cell adhesion via plasma membrane cell−adhesion molecules
ATP synthesis coupled electron transport
amino acid metabolic process
amino acid catabolic process
amine metabolic process
alpha−amino acid metabolic process
alpha−amino acid catabolic process
aerobic respiration
aerobic electron transport chain
acute inflammatory response
acute−phase response
